Springer-Verlag New York Inc., United States, 1998. Hardback. Book Condition: New. 1998 ed.. 236 x 157 mm. Language: English . Brand New Book. This is the tenth volume in the series Mathematics in Industrial Prob- lems. The motivation for these volumes is to foster interaction between Industry and Mathematics at the grass roots level; that is, at the level of specific problems. These problems come from Industry: they arise from models developed by the industrial scientists in ventures directed at the manufacture of new or improved products. At the same time, these prob- lems have the potential for mathematical challenge and novelty. To identify such problems, I have visited industries and had discussions with their scientists. Some of the scientists have subsequently presented their problems in the IMA Seminar on Industrial Problems. The book is based on the seminar presentations and on questions raised in subse- quent discussions. Each chapter is devoted to one of the talks and is self- contained. The chapters usually provide references to the mathematical literature and a list of open problems which are of interest to the industrial scientists. For some problems a partial solution is indicated briefly. The last chapter of the book contains...
