

Simulations of Potential Runout and Deposition of the Ferguson Rockslide, Merced River Canyon, California: Open-File Report 2007-1275 (Paperback)

Filesize: 8.78 MB

Reviews

The publication is great and fantastic. It is probably the most remarkable book i actually have read through. Its been printed in an exceedingly easy way and it is merely right after i finished reading through this publication where in fact altered me, modify the way i think.

SIMULATIONS OF POTENTIAL RUNOUT AND DEPOSITION OF THE FERGUSON ROCKSLIDE, MERCED RIVER CANYON, CALIFORNIA: OPEN-FILE REPORT 2007-1275 (PAPERBACK)

To get **Simulations of Potential Runout and Deposition of the Ferguson Rockslide, Merced River Canyon, California: Open-File Report 2007-1275 (Paperback)** PDF, make sure you follow the link listed below and save the ebook or have accessibility to additional information which are in conjunction with **SIMULATIONS OF POTENTIAL RUNOUT AND DEPOSITION OF THE FERGUSON ROCKSLIDE, MERCED RIVER CANYON, CALIFORNIA: OPEN-FILE REPORT 2007-1275 (PAPERBACK)** book.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.INTRODUCTION An active rockslide in Merced River Canyon was first noticed on April 29, 2006 when a few rocks rolled onto Highway 140 between mileposts 103 and 104, compromising traffic on this highway and signaling the onset of renewed activity of the Ferguson rockslide. State highway 140 is one of the main entrances to Yosemite National Park and is the primary road for large commercial trucks access into the park from the west. Continued rockslide activity during 2006 built a large talus cone that covered the highway and encroached into the Merced River below it. Observations by the US Forest Service (USFS), the California Department of Transportation (CALTRANS), and the U.S. Geological Survey (USGS) confirm that the rockslide remained active through 2006 and represents a potential threat to traffic along the rerouted highway as well as to recreational users of the Merced River in the runout path below the rockslide. Delineation of the hazards posed by the Ferguson rockslide is a necessary prerequisite to mitigating them. Field observations of the rockslide, shown in the photo of Figure 1, have constrained the geometry and structure of the slide mass (Beck, 2006; Gallegos and DeGraff, 2006). Based on initial estimates by geologists from USFS, CALTRANS and the USGS, the rockslide, active in 2006 and 2007, has an area of approximately 40,000 square meters and a volume of approximately 800,000 cubic meters. Structural mapping suggests that the motion of the slide is translational along a planar bed, and that differential motion of the slide from the toe to the headwall has resulted in formation of large tension cracks that transect the slide across the slope (Beck, 2006). These indications of persistent...
